

# SEIS PROCESS

## SEIS Scoping

This meeting is part of the Scoping stage of the SEIS process. During this stage, we welcome your initial input on these important project elements:

**Purpose and Need:** The Purpose and Need from the 2001 EIS will be re-evaluated and updated for the SEIS.

**Alternatives:** The alternatives advanced from the 2001 EIS will be re-evaluated alongside any new alternatives identified through the Scoping process.

**Environment:** Important natural and human environmental considerations are being studied.

**Implementation:** FHWA and VDOT anticipate completing the study process through a system of phased Records of Decision (RODs). This will allow specific sections of a selected alternative to be advanced to design and construction, while funding for other sections is identified.
